Secure Processes, Quality and Knowledge
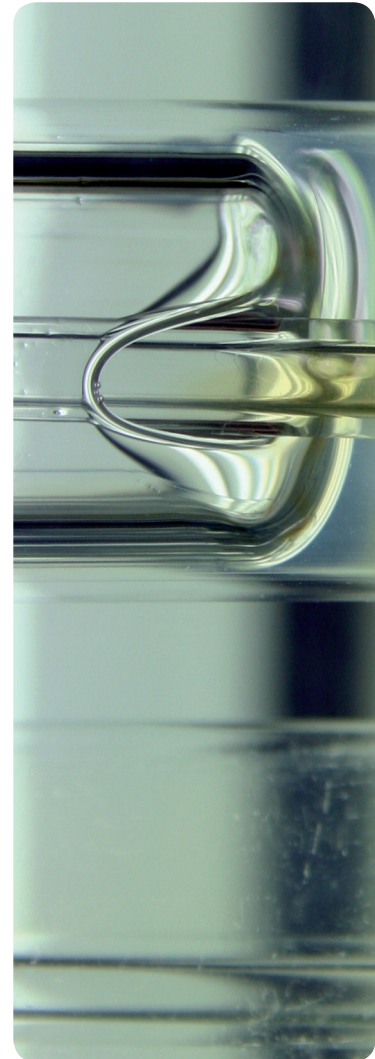

LIFE SCIENCE EDITION

SITUATION

- strong regulation of new product development
- high quality standards for product development
- unsystematic approach to knowledge management and discontinuous development of knowledge
- interaction of completely different areas such as science, technology and regulation

APPROACH

- web-based platform to develop, capture, store, and share knowledge systematically
- process management of all relevant stakeholders
- support of knowledge transfer within and between teams, departments and sites

FEATURES

- standard operating procedure (SOP) management
- quality forms management
- management of trainings
- 21 CFR Part 11 compliance
- integrated audit trail
- user authentication
- versioning (customer-specific) and review process
- linkage between documents
- prioritisation of tasks and automatic notifications
- customisation of roles and workflows
- integration of external users
- extended search options (filter, full-text including attachments)
- integration of additional life science processes such as GxP

EXAMPLES

| ✓ Quality forms (including qualifications and training needs)	Basis for Yellow Pages
✓ Validation and revision of SOPs and methods	Basis for Best Practices

INDUSTRIES

The web-based knowledge management platform KMmaster® is applicable in different life science branches including biotechnology and pharmaceutical industry, consumer goods, CROs and CMOs.

Secure Processes, Quality and Knowledge

USE CASES

- full-text search of documents and attachments based on metadata

- monitoring of processing times

- configuration of roles

- document and task management supported by email notifications
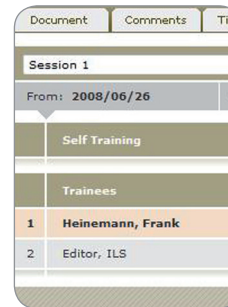

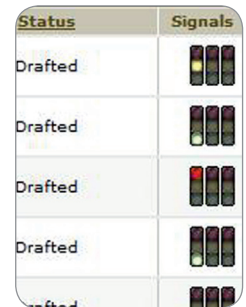

User authentication	Metadata	Processing times	Allocation of roles and trainings	Status indicator

Please feel free to contact us to arrange an individual presentation.
